Decentralized Inverter

Bonfiglioli

We engineer dreams

CONTENTS

DECENTRALISED INVERTER

PRODUCT OVERVIEW

Bonfiglioli experience brings you the new range of **decentralized inverters** for both Asynchronous and Permanent magnet or Reluctance synchronous motor control.
They have been designed exclusively for industrial or professional use and can be supplied as a Gear-Motor-Inverter or separately, for a wall or motor on-board assembly. Design and installation are faster compared to inverters installed in electrical cabinets since it is possible to avoid long cables, to spend less hours in electrical wiring activities and to reduce the cabinet dimension.
Thanks to its various features and options our high-level performance solution is perfect for **Packaging**, **Logistics**, **Material handling**, **Food&Beverage** and **Pumps** sectors.

Features	Benefits
Decentralised	Cost effectiveness
Sensorless Vector Control operation	Efficiency
Internal PLC	Flexibility
Intergated PID dry run protection	Reliability
Aluminium housing with IP65	Robustness
Safe torque off	Safety

Inverter series		Size	Power range per size (kW)
DGM1		A	0.37 - 1.1
DGM3		A	0.55 - 1.5
		B	2.2 - 4.0
		C	5.5 - 7.5
		D	11 - 22
DGM-MPM		A	0.55 - 2.2
		B	2.2 - 5.5
		C	5.5 - 11
		D	11 - 30

TECHNICAL FEATURES

DGM

Five sizes covering motor ratings from 0.37 to 22 kW, each available in the motor-mounted, wall-mounted and cold plate variants. The DGM drive controllers can also be fitted with the Safe Torque Off function.

1 | INVERTER SPECS

- Integrated soft PLC
- Pre-fitted cable glands
- Fan-free design up to 7.5 kW
- STO functional safety up SIL3/PLe

2 | FIELD BUS

CANopen · PROFIBUS · EtherCAT · PROFINET · Modbus-RTU · sercos the automation bus

3 | OPERATION & OBSERVATION

- Potentiometer
- M12 RS485 service interface
- MMI* handheld controller
- MMI* cover option
- DGM PC software VPlus Dec
- Integrated PID control system

4 | MOTOR ADAPTATIONS

- Motor adapter concept compatible with Bonfiglioli motors

5 | PROTECTION

- IP65 class
- Robust and vibration-resistant housing concept

**MMI = Man Machine Interface*

Asynchronous motors

TECHNICAL FEATURES

DGM Modular

Robust and highly efficient drive controller for synchronous and synchronous reluctance and asynchonous motors in the extended speed range. Extensive configuration options such as main switch, integrated braking resistor, fieldbus and option modules allow an individual composition.

1 | INVERTER SPECS

- Pre-fitted cable glands
- Design without fans
- 100% of connections can be plugged in (Harting plug/ Quickon)
- Optional slots
- STO functional safety up SIL2/PLd
- Internal PTC brake resistor

2 | FIELD BUS

CANopen, Modbus-RTU, EtherCAT, PROFINET, EtherNet/IP, sercos the automation bus

3 | OPERATION & OBSERVATION

- Potentiometer
- M12 RS485 service interface
- Main switch
- MMI* handheld controller
- MMI* cover option
- Touch operating terminal
- DGM Modular PC software VPlus Dec

4 | MOTOR ADAPTATIONS

- Motor adapter concept compatible with Bonfiglioli motors

5 | PROTECTION

- IP65 class
- Robust and vibration-resistant housing concept

MAIN DIFFERENCIES

	DGM 1 & DGM 3	DGM MPM
Power Supply	1 or 3 Phase	3 Phase
Power Range	0,37 to 22kW	0,55 to 30kW
Motor management	Asynchronous	Asynchronous & Synchronous (Reluctance & Permanent magnets)
PID controller	Yes	No
Soft PLC integrated	Yes	Yes
Electrical wiring time	Medium	Low
Digital I/O	4 Input / 2 Output	3* Input / 1 Output
Output Relays	2	0
Analog I/O	2 input / 1 Output	1** input / No Output
24VDC Supply	Internal and External	Internal and External***
Motor PTC plug	Yes	Yes
Potentiometer	Yes	Yes
Main switch on board	No	Yes
Fieldbus	Modbus, CANOpen, Profibus, Profinet, EtherCAT, Sercos III	Modbus, CANOpen, Profinet, EtherCAT, Sercos III, Ethernet IP
Safe Torque Off ****	SIL3/PLe	SIL2/PLd
Brake Chopper	Yes	Yes
Brake rectifier for FD brake	Yes	Yes

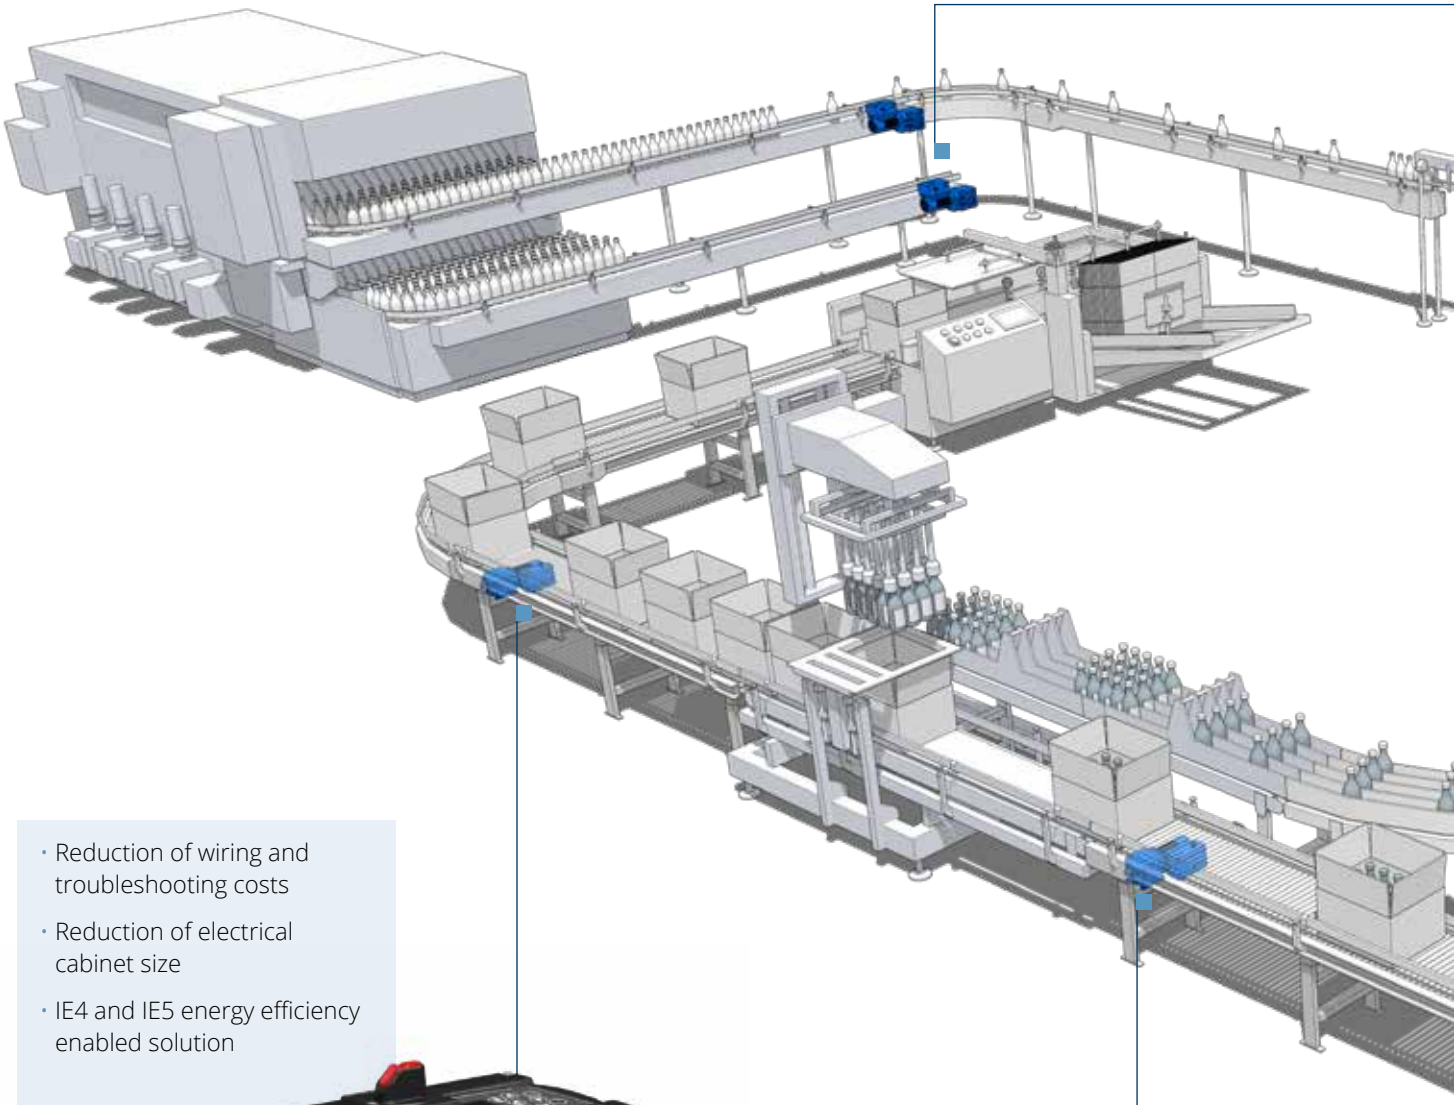
* *+1 digital input if avoid potentiometer and implement an additional M12 JS 3 poles connector*
** *+1 analog input if avoid potentiometer and implement an additional M12 JS 3 poles connector*
*** *only with field-bus option or STO option*
**** *STO is not available for DGM1 version of DGM*

PACKAGING
FOOD & BEVERAGE
PUMPS
MATERIAL HANDLING

SUITABLE SECTORS AND APPLICATIONS

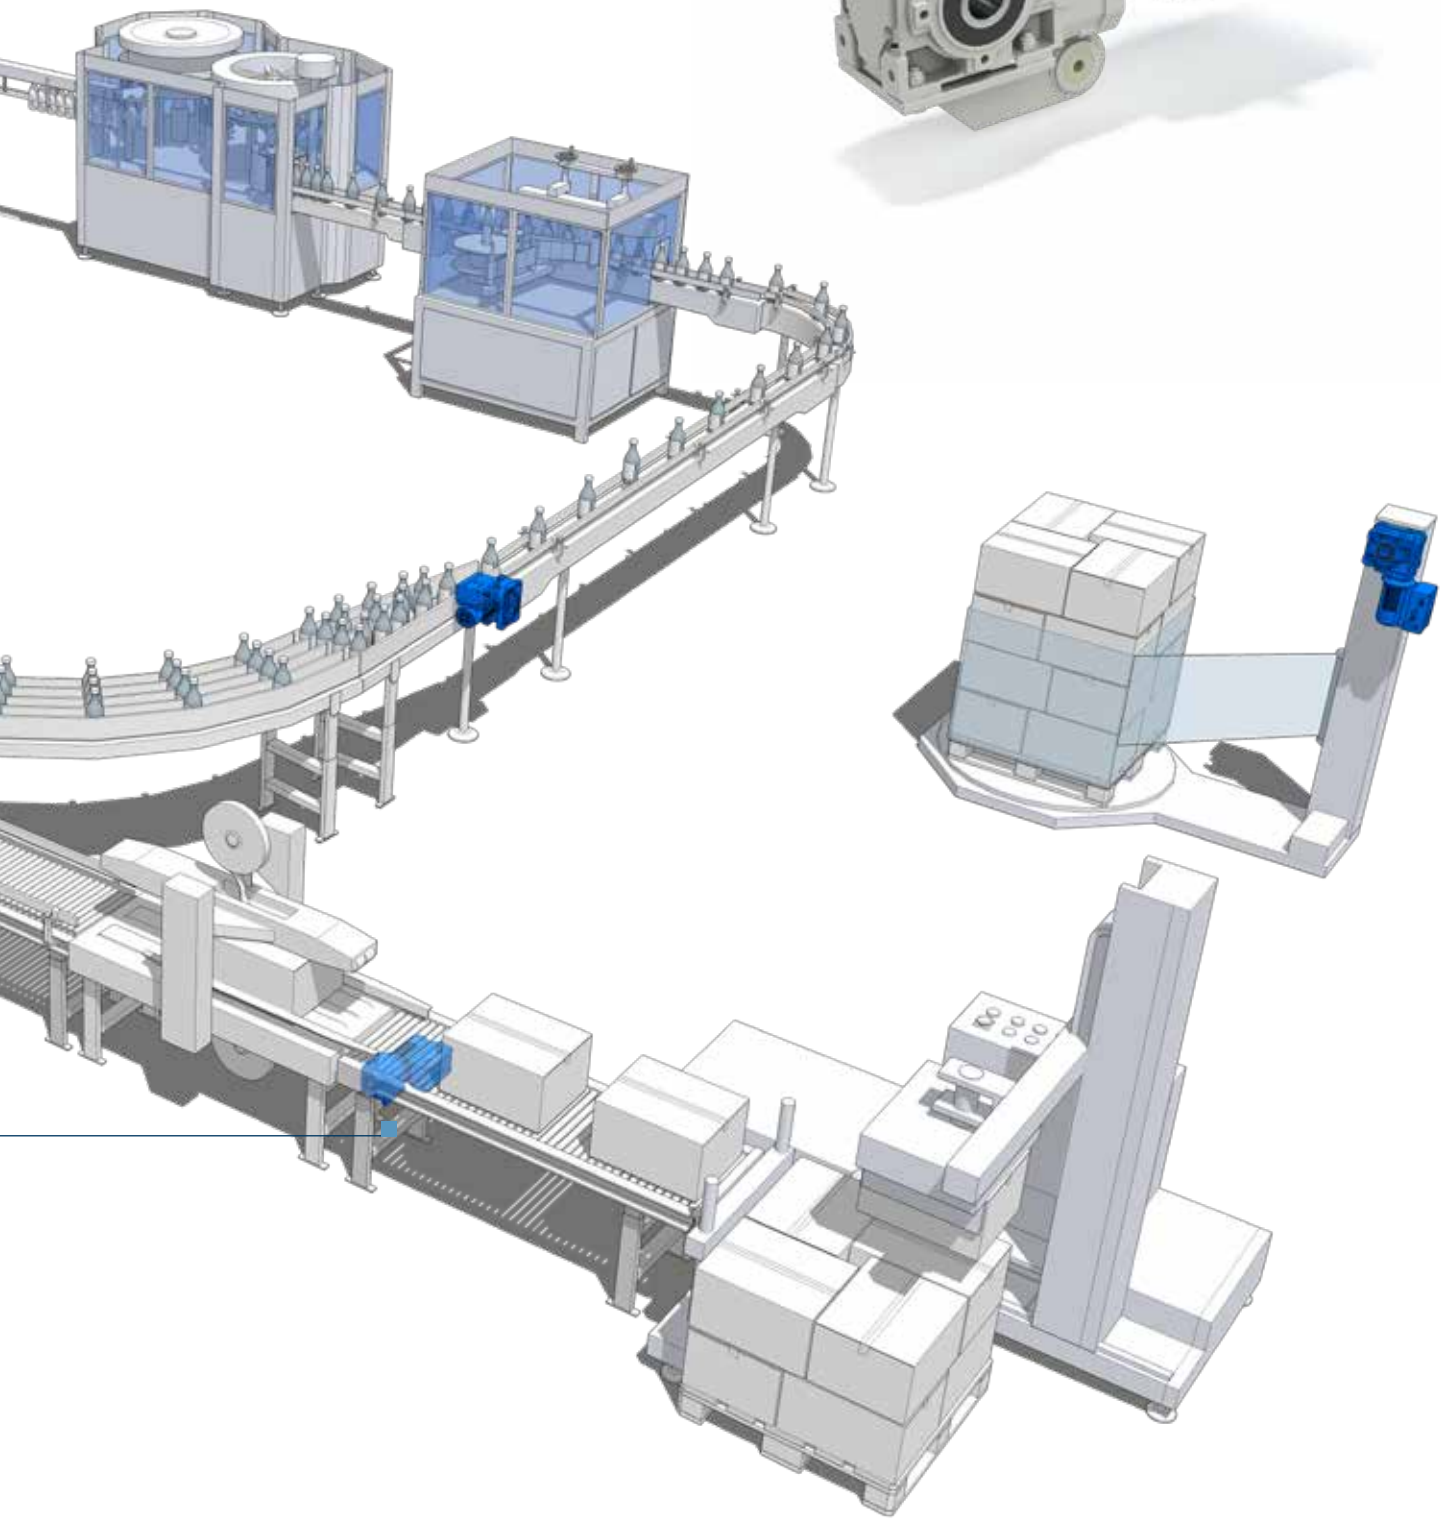
DGM Modular

CONVEYOR FOR PACKAGING AND MATERIAL HANDLING



- Reduction of wiring and troubleshooting costs
- Reduction of electrical cabinet size
- IE4 and IE5 energy efficiency enabled solution

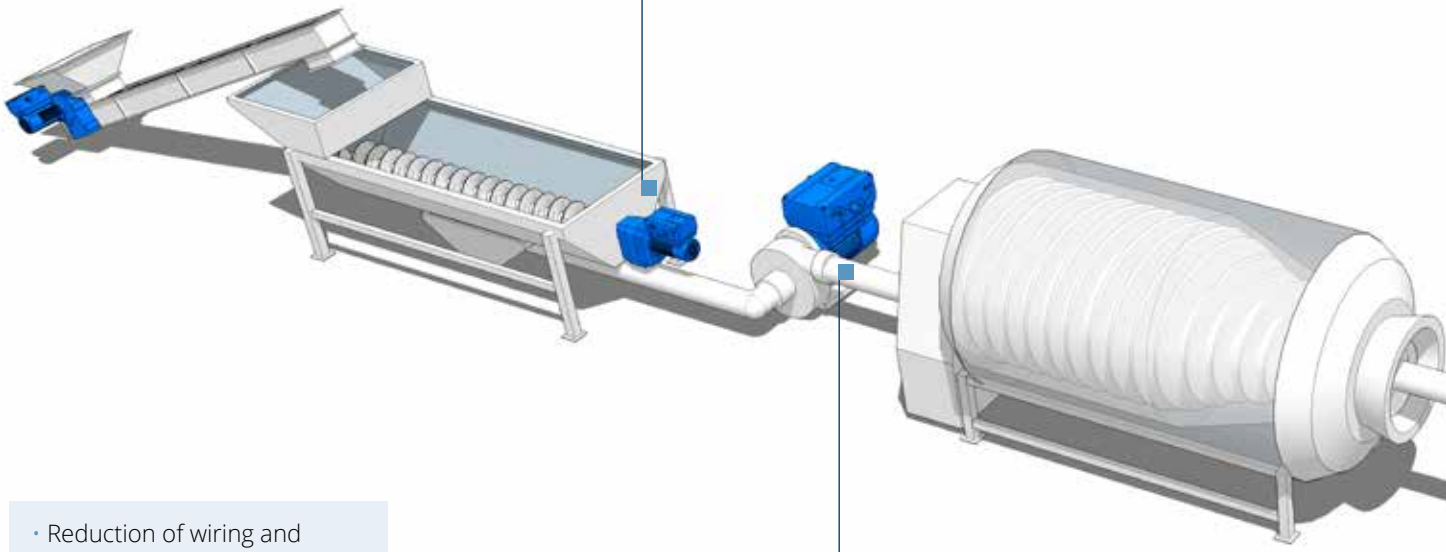
- Complete solution flexibility
- Enhanced product modularity and interchangeability
- Real time check of main gearmotor parameters through fieldbus interfaces or protocols



SUITABLE SECTORS AND APPLICATIONS

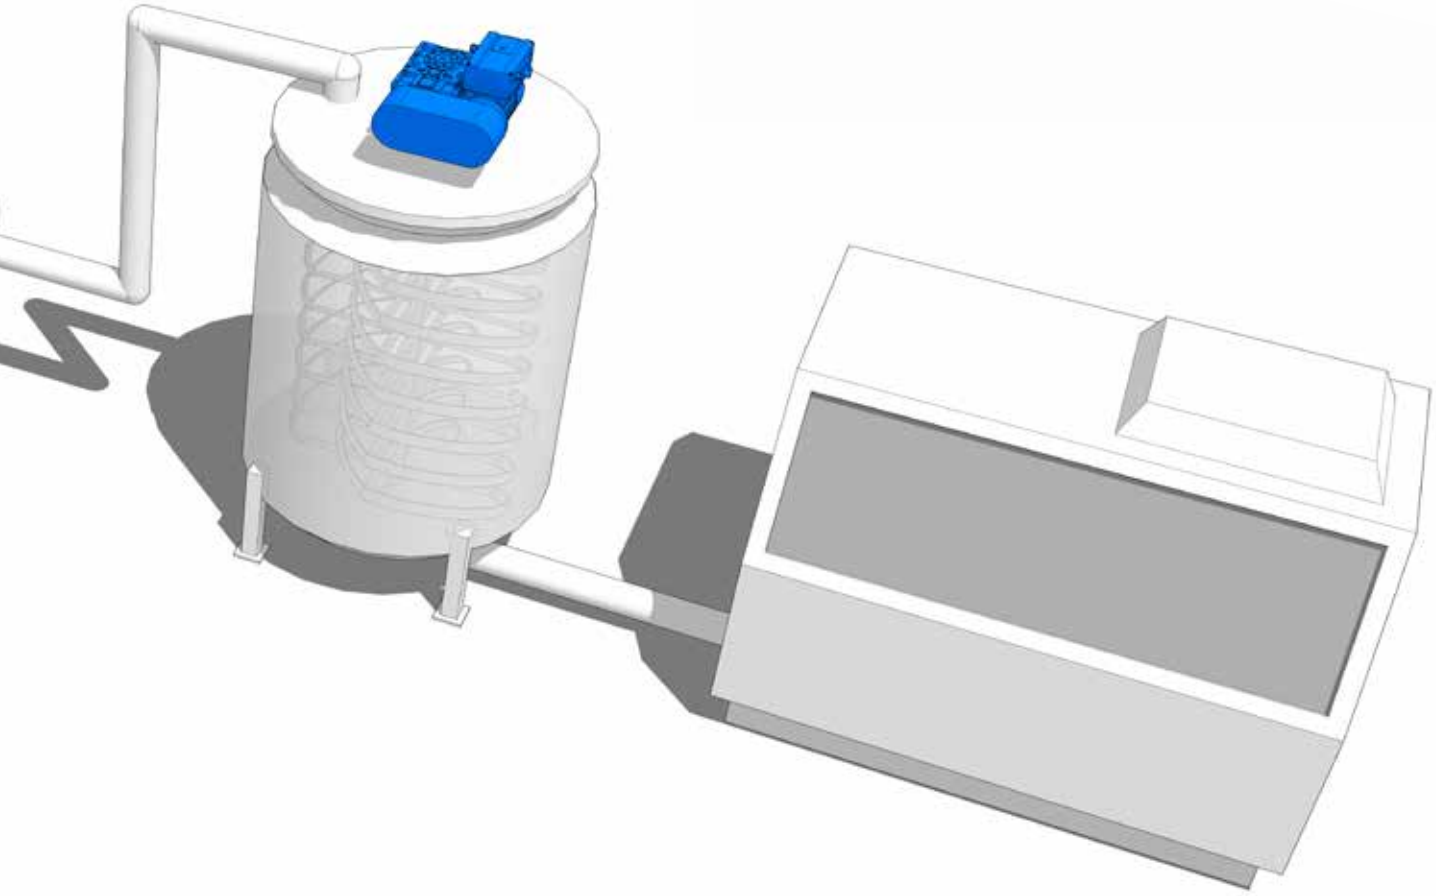
DGM

FOOD & BEVERAGE AND PUMPS



- Reduction of wiring and troubleshooting costs
- Reduction of electrical cabinet size

- Complete solution flexibility
- PID control with automatic speed control
- Reluctance synchronous motor control with high performant sensorless vector control at low speed
- Real time check of main gearmotor parameters through fieldbus interfaces or protocols



HIGH EFFICIENCY BONFIGLIOLI SOLUTION

Reluctance synchronous motor with decentralized inverter: BSR + DGM Modular

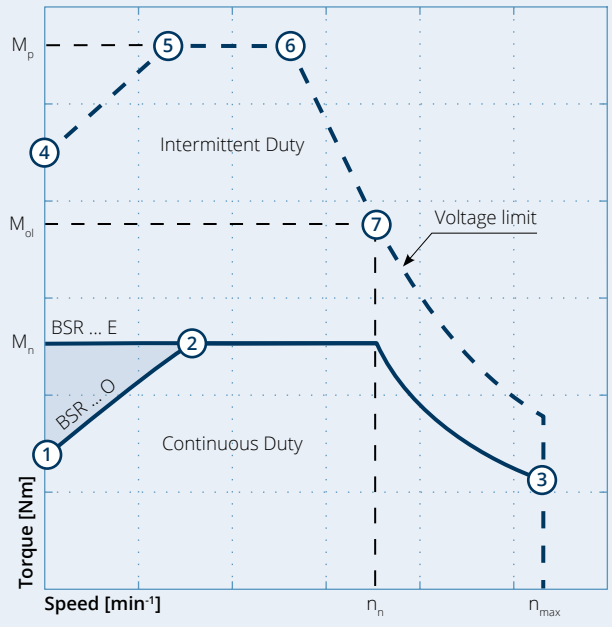
Bonfiglioli SynRM (BSR) motors improve the energy efficiency and TCO of machines and processes.

Thanks to the proven simplicity and maturity of induction motors and the very high efficiency of those with permanent magnets, BSR motors guarantee high performance and high reliability while containing life cycle costs.

DGM Modular's sensorless control over the reluctance solution is impressive and can push your applications to very slow speeds while maintaining incredible performance.

Features	Benefits
Up to IE4 efficiency level	Lower total cost of ownership
Lower operating temperature	Longer bearings lifetime
Lower intrinsic moment of inertia	Higher dynamic response
Accurate sensorless speed and torque control	Enhanced reliability
Compactness versatility	Better application layout
0,37-18,5kW with IEC flange and standard frames	Perfect for retrofit on induction and PM motors

SynRM speed torque characteristics



Significant working points graph

The permissible operating range of a Synchronous Reluctance motor is limited by thermal, mechanical, electromagnetic and sensorless control.

The performance characteristics of a Synchronous Reluctance motor are described by a torque/ speed operating area and refers to the BSR motor combined with Bonfiglioli drive.

Symbol	U.m.	Description						
		1	2	3	4	5	6	7
Torque	[p.u.]	0.4	1	0.4	1.5	3	3	1.5
Speed	[p.u.]	0	0.4(1) 0.2(2)	1.5	0	0.3	0.8	1
Duty	-	Continuous		Intermittent				

(1) The value is valid only for BSR motor with nominal speed 1500 min-1
(2) The value is valid only for BSR motor with nominal speed 3000 min-1

BSR POWER DRIVE SYSTEM REACHES IES2 SUPER PREMIUM EFFICIENCY

The IEC EN 61800-9-2 standard defines the efficiency classes IES0 to IES2 for the **combination of AC drives together with a motor**, defined as **Power Drive Systems** (PDS) in the regulation.

Power Drive Systems efficiency classes

Losses of the reference power drive system, corresponding to IES1 class, are defined for the 8 specific operating points. If the PDS has 20% more losses than the reference value, it will be categorized as IES0. If it has at least 20% less losses than the reference, it will become IES2.

IES0	+20% losses
IES1	IES1 = reference
IES2	-20% losses ←

Reluctance and induction motors comparison

Power Drive System (PDS)

ACU or DGM

BSR E series

IE4 at 1500rpm

High efficiency IE4 BSR solution

Same frame size > Same output power & More Efficiency
-24% Rotor inertia
+5,4% Efficiency

BSR O series

Power Supply 10 V	• Auxiliary voltage U = 10 V dc • Short-circuit proof • I_{max} = 30 mA

OPTIONS

OVERVIEW

	DGM 3	DGM MPM
Input/Output	4 Input / 2 Output	4 Digital Input* / 1 Digital Output
Main switch on board	No	Yes
MMI keyboard integrated	Yes	Yes
Potentiometer	Yes	Yes
Safe Torque Off	SIL3/PLe**	SIL2/PLd
Brake Chopper	Yes	Yes
Brake rectifier for FD brake	Yes	Yes

* *3 digital inputs + 1 digital output (only for signaling LEDs) are standard on the I / O module. If necessary, a forth additional digital input can be added as an option (M12 connector) instead of the potentiometer.*

** *STO is not available for DGM1 version of DGM*

MAIN SWITCH ON BOARD

The integrated main switch allows the supply voltage to be fully disconnected.
The MS (Main switch) is compliant with the L1 LOTO (Lock Out Tag Out) UL standard related to safe maintenance.

Note: Available only on DGM Modular

EMBEDDED KEYBOARD

MMI (Man Machine Interface) keyboard integrated

The external lid is available in combination with a programming keyboard with its own display embedded (IP protection class will be the same as the device one). This keyboard features 8 buttons and 1 display and it is ideal for customers with special needs; The full functionality of the handheld controller, combined with 5 freely selectable status screens, enables parameterization and operation on the drive controller itself.

The embedded keyboard can be used to program the inverter and display current values and alarms.

Note: Available on both DGM and DGM-MPM

QUICKON CONNECTORS

The QUICKON connector from Phoenix Contact allows with its comfortable plug connection a simple connection of the supply voltage.

NOTE: Quickon connectors are available only with DGM Modular

DAISY CHAIN POWER SUPPLY CONNECTORS

Robust industrial connectors from Harting enable fast connection of the supply voltage. Also a looping (daisy chain) is possible with this option.

Bonfiglioli provides only the harting socket with the insert fixed on top. The customer must order separately the connector (case + insert) to a connector supplier.

NOTE: The option is available only on DGM Modular

STO FUNCTIONAL SAFETY

The Machine Directive defines the safety requirements for each machine. In particular, all machine movements must be controlled by a safety system that, in case of emergency, can stop the motor, switch them off and prevent their restart, until normal conditions are restored.
For this purpose, both the DGM3* and the DGM-MPM can be equipped with the Safe Torque Off (STO) function. This function is controlled via two special redundant safety channels, both with positive reference and with ground reference.

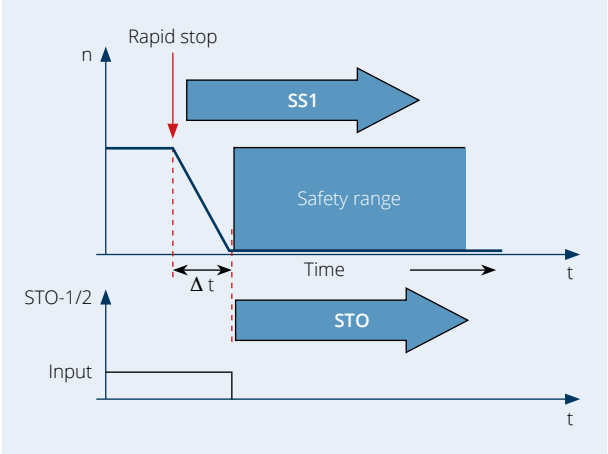
** DGM1 cannot be equipped with the STO.*

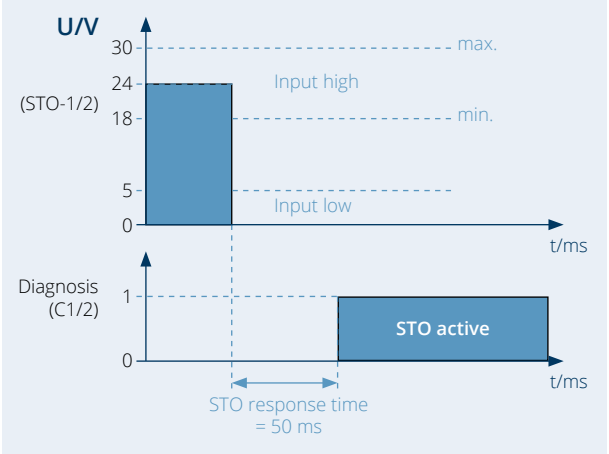
STO for DGM3:

TÜV SIL3 EN IEC 62061 STO PLe EN ISO 13849-1

In the STO version, the two output relays are replaced by the two STO safety channels and related feedback contacts, while the Hardware enable of the standard version is replaced by digital input 5, used to activate the Safe Stop 1 (SS1) function (when this function is triggered, the motor is braked with the ramp set in the relevant parameter, and then secured with the STO function).
In order to be utilized, the SS1 function must be managed with the help of an external safety device (i.e. a control unit or a safety PLC)

Name	Value
STO max. response time*	50 ms
PELV/SELV STO channel (nominal) supply voltage	24 Vdc
PELV/SELV STO supply voltage tolerance (referred to the nominal voltage)	± 25 %
STO channel current absorption with nominal voltage	typ. 65 mA
Start-up phase peak current (2.5 ms)	400 mA
Compatibility: Max OSSD pulse	1 ms
Compatibility: Min. OSSD pulse time	10 ms
STO Input Low	0...5 Vdc
STO Input High STO Input High when operating with OSSD signals	18...30 Vdc 19.2...30 Vdc





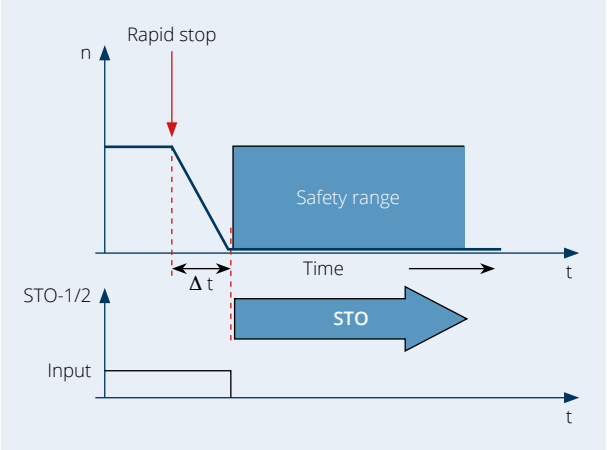
* *The STO response time is the time between deactivation of the STO input signal and the definite fail-safe pulse block.*

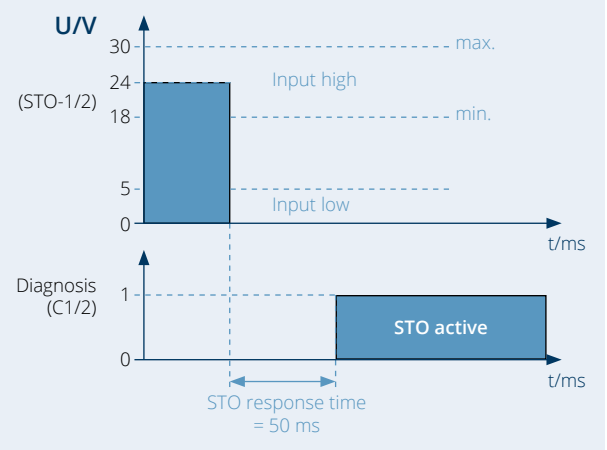
STO FUNCTIONAL SAFETY

STO for DGM-MPM:

TÜV SIL2 EN IEC 62061 STO PLd EN ISO 13849-1

Name	Value
STO max. response time*	50 ms
PELV/SELV STO channel (nominal) supply voltage	24 Vdc
PELV/SELV STO supply voltage tolerance (referred to the nominal voltage)	± 25 %
STO channel current absorption with nominal voltage	typ. 80 mA
Start-up phase peak current (2.5 ms)	500 mA
Compatibility: Max OSSD pulse	1 ms
Compatibility: Min. OSSD pulse time	10 ms
STO Input Low	0...5 Vdc
STO Input High STO Input High when operating with OSSD signals	18...30 Vdc 19.2...30 Vdc





* *The STO response time is the time between deactivation of the STO input signal and the definite fail-safe pulse block.*

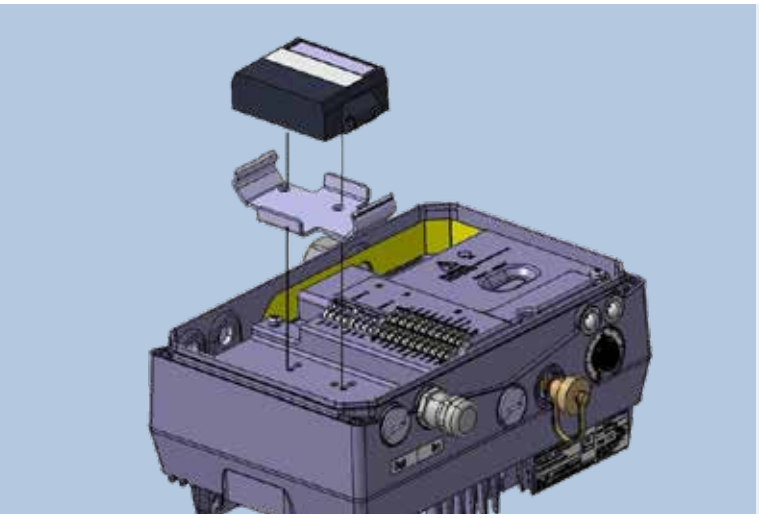
BRAKE RECTIFIER MODULE | DGM

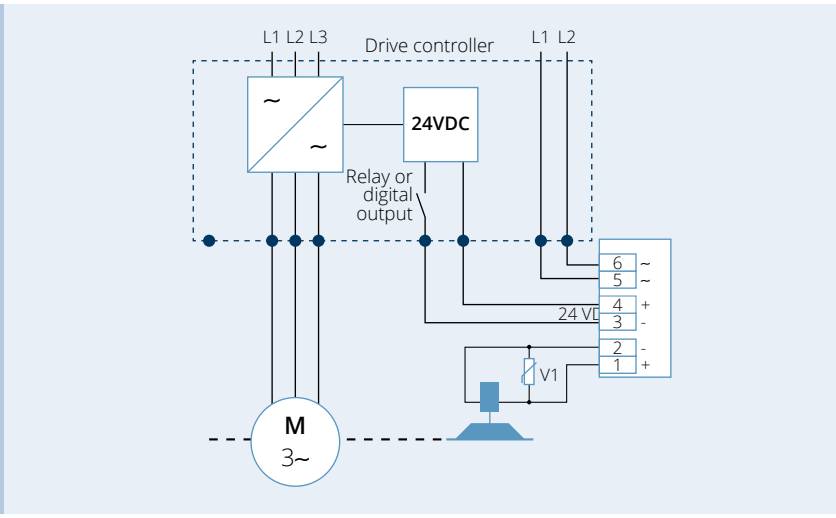
The rectifier module - available as accessory - is used to control a brake in direct current.
The rectified module is powered with alternating voltage, and it controls the brake with direct voltage, whose value depends on the module supply voltage.

Supply voltage [Un]	Internal circuit	Brake voltage
230 Vac	Half-wave rectifier (Un x0.445)	102 Vdc
400 Vac	Half-wave rectifier (Un x0.445)	180 Vdc

(Table 1)

In order to protect the brake coil against any current peaks, a varistor - to be connected in parallel to the control clamps - is supplied with the rectifier module.





DGM1 and DGM3 can be equipped with a brake rectifier accessory as an option.

Whenever the DGM manages a brake-motor*, the brake rectifier option must be selected and installed on board. This because the standard rectifier present on Bonfiglioli self-braking motors cannot be managed directly by a PLC.

In this case, the brake-motor solution suggested by Bonfiglioli is the following:

FD + no rectifier + SD: the FD brake coil is powered through the DGM rectifier (Vdc).

The correct voltage value of the brake coil to be selected depends on the main power supply of the inverter (table 1).

** Only FD brakes can be selected (DC brake power supply). FA brakes can't be configured in combination with a DGM.*

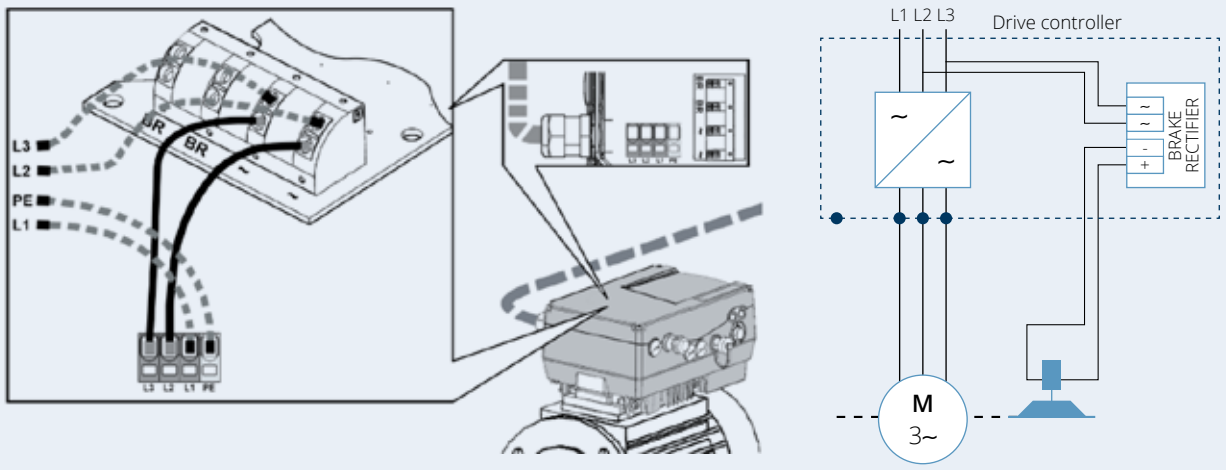
BRAKE RECTIFIER MODULE | DGM MODULAR

The rectifier module - available as an option to choose during the configuration phase of the inverter (this means it cannot be added after ordering the inverter), is used to control a brake in direct current.
The rectified module is powered with alternating voltage, and it controls the brake with direct voltage, whose value depends on the module supply voltage.

Supply voltage [Un]	Internal circuit	Brake voltage
230 Vac	Half-wave rectifier (Un x0.445)	102 Vdc
400 Vac	Half-wave rectifier (Un x0.445)	180 Vdc

Table 2

CONNECTION OF MECHANICAL BRAKE TO BRAKE MODULE



Whenever the DGM Modular manages a brake-motor*, the brake rectifier option must be selected and installed on board. This because the standard rectifier present on Bonfiglioli self-braking motors cannot be managed directly by a PLC.

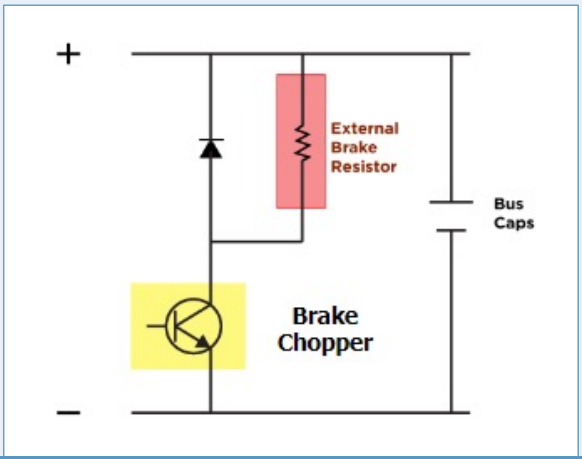
In this case, the brake-motor solution suggested by Bonfiglioli is the following:

FD + no rectifier + SD: the FD brake coil is powered through the DGM Modular rectifier (Vdc).

The correct voltage value of the brake coil to be selected depends on the main power supply of the inverter (table 2).

BRAKE CHOPPER AND INTEGRATED BRAKE RESISTOR

When speed of an inverter-controlled electric motor is reduced, the motor acts as a generator, feeding back energy to the frequency inverter. The inverter link circuit voltage is increased, until it reaches a value beyond which excess power must be suitably discharged via external dissipative components. The DGM version with brake chopper can support therefore mentioned technique to connect a braking resistor for power thermal dissipation.
All sizes are available with the brake chopper option.
This version is equipped with two additional clamps (B+ and B-) that can be connected to the relevant braking resistor, whose size is based on the application dynamics.



Available on all DGMs, brake chopper can be chosen as optional. It allows to connect a braking resistor to the inverter. In deceleration phase the motor operates as generator and supplies energy to the inverter. The braking resistor can absorb the exceeding energy avoiding inverter failure and permitting fastest brakes with high loads.

The braking resistor to be connected to the chopper is available as accessory.

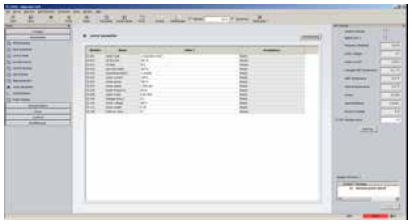
Brake resistors

	Brake resistor	Power	ED
		[W]	[%]
	**Size A** 100 W, 100 Ω, IP65, connection cable 510 mm, 110x80x15 mm (LxWxH)	550	13.60
		750	10.00
		1100	6.80
		1500	5.00
	**Size B** 200 W, 50 Ω, IP65, connection cable 510 mm, 216x80x15 mm (LxWxH)	2200	9.00
		3000	6.66
		4000	5.00
	**Size C** 240 W or 400 W*, 72 Ω, IP65, connection cable 510 mm, 216x80x30 mm (LxWxH)	5500	4.3 / 7.3*
		7500	3.2 / 5.3*
	**Size D** 2x240 W o 2x400 W*, 2x72 Ω, IP65, connection cable 510 mm, 216x80x30 mm (LxWxH)	11000	4.4 / 7.2*
		15000	3.2 / 5.3*
		18500	2.6 / 4.3*
		22000	2.2 / 3.6*

SOFTWARE AND FIELDBUS

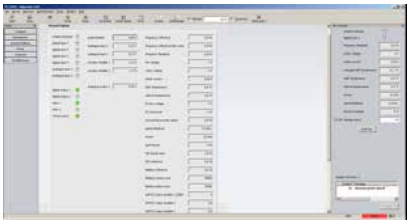
VPLUS DEC PROGRAMMING SOFTWARE

If mounted on the gearmotor, DGM is preconfigured in Bonfiglioli's factories; in particular, motor parameters are set-up and autotuning is performed.
Based on their needs, user can change the settings via the MMI keypad available as an accessory, or with the VPlus Dec programming software.
The VPlus Dec software is available free of charge and is compatible with the latest Windows versions (Windows XP and later).
To connect the PC to DGM, use the programming cable available as an accessory.
With the Vplus Dec programming software, users can easily perform all configuration, troubleshooting and testing operations.
The graphic interface is user-friendly and easy to manage.



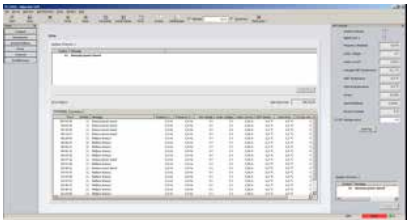
Parameters

- Changing the parameters value.
- Uploading and saving a parameter set from the inverter to the PC.
- Downloading parameters on the inverter.
- Assigning access levels.



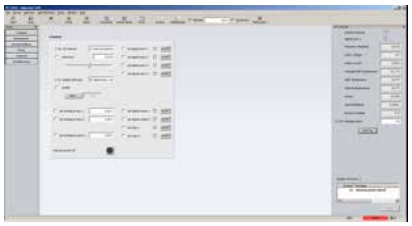
Actual values

Displays the inverter, digital inputs/outputs, analog input/outputs and potentiometer operating values and process variables in real time.



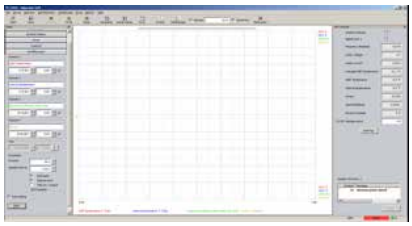
Errors

- Displays the actual error.
- Displays the buffer with the latests 20 alarms.
- Displays the alarm counters divided by type.



Control system

- From here, you can control the inverter directly.
- Digital inputs/outputs overwriting.
- Analog inputs/outputs overwriting.
- Motor control frequency overwriting.
- This mode can be used during commissioning or testing.

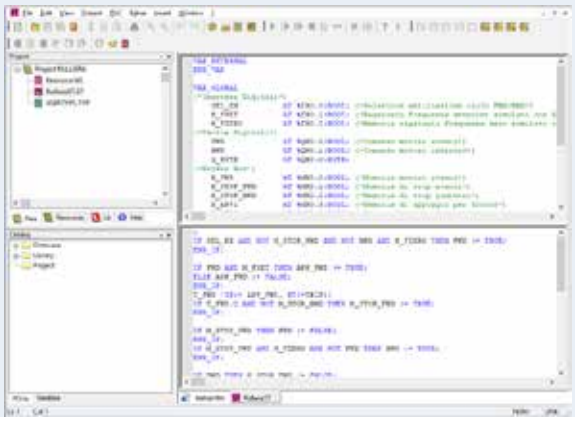


Oscilloscope

Possibility of managing up to 4 customizable channels.
The oscilloscope data can be loaded in.csv and.txt format.

SOFT PLC

All DGM are equipped with an embedded PLC, whose functions can be used via the Soft PLC program (IEC 61131-3).
The soft PLC function helps you to manage the inverter and its application in stand alone mode. This is possible by editing the functional program, integrating also third party components such as selectors or push-buttons.
In order to use this function properly it is necessary to have another program in addition to the VPlus Dec one.
Programming can be performed in FBD (Function Block Diagram), ST (Structured Text), IL (Instruction List), LD (Ladder Diagram) and SFC (Sequential Function Chart) mode.
The software is available free of charge.



FIELDBUS OVERVIEW

The choice of the preferred field bus usually depends on the controller manufacturer used in the system, the geographic region, the functional requirements in terms of speed and network spread and availability of suitable field devices. The DGM product families offers many communication options, allowing it to be easily integrated in existing automation processes without having to depart from the fieldbus systems used previously in the application. The fieldbus systems can be selected as options.
To interface with control and monitoring devices several fieldbus are available. CANopen* protocol is standard on DGM Modular, while Modbus RTU protocol is standard on both DGM and DGM Modular. As option, in addition to the standard ones, it's possible to choose between the available fieldbus interfaces or protocols below:

DGM

Modbus -RTU · CANopen · PROFINET · PROFIBUS · EtherCAT · sercos the automation bus

DGM Modular

Modbus -RTU · CANopen · PROFINET · EtherCAT · sercos the automation bus · EtherNet/IP

We provide manuals with process data and SW details for each field-buses.

** Available with additional M12 connector*

ACCESSORIES

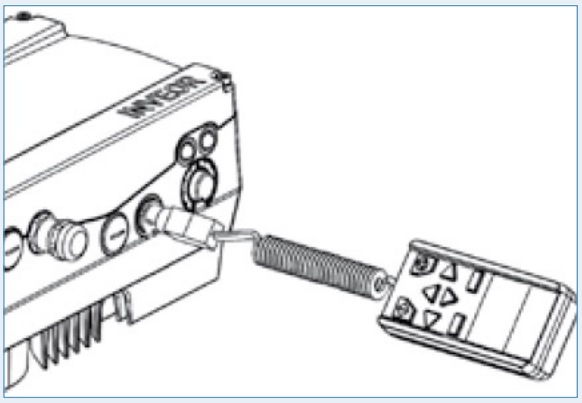
MMI (MAN MACHINE INTERFACE) HANDHELD CONTROLLER

For commissioning, parameter adaptations and service purposes, our flexible MMI handheld controller is available as an alternative to the VPlus Dec PL software. With this control device, users can can commission, change/save, display the decentralized inverter parameters and perform troubleshooting operations.

On the MMI, you can save up to 8 complete data sets, control the inverter manually or check the actual and saved alarms.

The hand-held MMI control device is connected to the inverter integrated interface and no external signals or power supply are required.

The keypad is supplied with a 3-meter spiral cable, RJ9 connector and M12 connector



PROGRAMMING CABLE

To connect it with the VPlus Dec programming software, use the special communication cable available as accessory.
2 meter communication cable with USB connector on one side and M12 connector on the other, with integrated RS485 converter.

TECHNICAL DETAILS | DGM1 - MONO-PHASE

			DGM1 (230 Vac)			
Electric data	Size		A			
	Electric systems		TN/TT			
	Input current	[A]	4.5	5.6	6.9	9.2
	Nominal output current, act. (a 8kHz)	[A]	2.3	3.2	3.9	5.2
	Min. brake chopper	[Ω]	50			
	60 sec. overload	[%]	150			
	Switching frequency	[kHz]	4, 8 (default), 16			
	Output frequency	[Hz]	0 ÷ 400			
	Network start / reconnecting cycles		Every 2 min			
	Braking module		Un 230Vac / Ufreno 102Vdc Un 400Vac / Ufreno 180Vdc			
	Contact current DIN EN 61800-5		< 10 mA			
Functions	Protection functions		Overvoltage and undervoltage, I^2t limitation, shortcircuit, ground fault, motor and inverter temperature, tilting prevention, block detection, dry PID cycle protection			
	Software functions		Process control (PID), fixed frequencies, dataset switching, quick restart, motor current limitation			
	Soft PLC		IEC61131-3, FBD, ST, AWL			
	Safe Torque Off (STO) function		Not available			
Mechanical data	Housing		Die-cast aluminum housing			
	Size (L x W x H)	[mm]	233x153x120			
	Weight, inc. adapter plate	[kg]	3.9			
	Degree of protection		IP65			
	Cooling		Passive			
Environmental conditions	Room temperature		-10°C (without condensation)...+40°C (+50°C with derating)			
	Storage temperature		-25 °C... +85 °C			
	Installation altitude		up to 1000m s.l.m. / higher than 1000m with reduced power (1% every 100m) / higher than 2000m see the Instruction Manual			
	Air relative humidity		≤ 96% no condensation allowed			
	Vibration resistance (DIN EN 60068-2-6)		50m/s²; 5... 200 Hz			
	Impact resistance (DIN EN 60068-2-27)		300m/s²			
	EMC (DIN EN 61800-3)		C1			
Interfaces	I/O interfaces		4 DI/2 DO/2 AI/1 AO/2 RELAY/1 IN PTC			
	Internal power supply		24Vdc, 100mA / 10Vdc, 30mA / shortcircuit protection			
	External power supply 24 Vdc		24 Vdc ± 15%			
	Embedded fieldbus		Modbus RTU			
	Optional fieldbus		CANopen, ProfiBUS, ProfiNET, EtherCAT, Sercos III			
	Status LED		2 LEDs (1 red, 1 green)			
	Certificates of conformity		ROHS, CE, UL, CSA			

TECHNICAL DETAILS | DGM3 - THREE-PHASE

			DGM3 (400 Vac)												
Electric data	Size		A				B			C		D			
	Connected motor power	[kW]	0.55	0.75	1.1	1.5	2.2	3.0	4.0	5.5	7.5	11.0	15.0	18.5	22.0

Technical data for DGM-MPM (subject to technical changes)
1) Recommended motor rating (4-pole asynchr. motor) is given based on the 400 V AC supply voltage.
2) In compliance with the overvoltage category.
3) < 3 s may result in power failure/intermediate circuit undervoltage faults.
4) With 1LA7 asynchronous motor, motor-mounted.
5) Low-duty devices with reduced overload.
6) Only for synchronous and reluctance motors.

CONFIGURATION GUIDELINES

ENVIRONMENTAL CONDITIONS

Storage

See the Product Storage Guidelines on the EVOX user manual at www.bonfiglioli.com for a thorough description of every environment and treatment conditions (for less and more than 6 storage months).

Observe the following instructions to correctly store the products:

a) Do not store outdoors, in areas exposed to the weather or with excessive humidity.
b) Always place boards, wood or other materials between the products and the floor. The gearboxes should not have direct contact with the floor.
c) In case of long-term storage, all machined surfaces such as flanges, shafts and couplings must be coated with a suitable rust inhibiting product (Mobilarma 248 or equivalent).

In addition, the gear units must be placed with the fill plug in the highest position and filled up with oil.
Before putting the units into operation, top-up with the appropriate quantity and type of oil (refer to the User's manual available at www.bonfiglioli.com).

STANDARDS AND REGULATIONS

EN 61800-5-1 (2007)	Adjustable speed electrical power drive systems - Part 5-1: Safety requirements - Electrical, thermal and energy
EN 61800-3 (2004/A1:2012)	Adjustable speed electrical power drive systems. EMC requirements and specific test methods
EN 50581 (2012)	Technical documentation for the assessment of electrical and electronic products with respect to the restriction of hazardous substances
EN 61800-5-2 (2007)	Adjustable speed electrical power drive systems - Part 5-2: Safety
EN 62061 (2005/A1:2013/AC:2010)	Safety of machinery - Functional safety of safety-related electrical, electronic and programmable electronic control systems

Decentralized inverter

DGM

DGM Modular

* *BMD permanent magnet motors can be combined with the DGM Modular decentralized invertert too but the feasibility and the dimensioning must be checked case by case*

MOTOR-INVERTER COMBINATION RULES

During the product selection process it is important to know that some combination of motor options and the decentralized inverter are not always feasible.

Here below we have collected these information

DGM Compatibility with Motor Options

Brake with alternating current	FA	Not compatible
Motor with handwheel	F1	Not compatible
Motor with connectors	CON	Not compatible
Additional cables input	IC	Not compatible
Servofan with separate terminal box	U1	For some mounting arrangements and based on the FD brake presence, the servofan must be rotated by 90°. because the terminal box footprint would interfere with the inverter footprint
Servofan with terminal box in the motor box	U2	Not compatible
Brake release lever	R and RM	No AA position installation
Anti-condensation heaters	H1 and NH1	Not compatible with Size D
Brake microswitch	MSW	For Size D, the microswitch cable cannot be inserted in the motor box; the user must connect it in a suitable box

DGM1 | 1-PHASE COMPATIBILITY WITH BONFIGLIOLI ASYNCHRONOUS MOTORS

Compatibility table to install the decentralized inverter on the motor, based on the mounting arrangement.

ORDER INFO

OUR PROJECTION INTO THE FUTURE

MORE THAN 250 EMPLOYEES AROUND THE WORLD ARE INVOLVED IN THE GROUP'S R&D ACTIVITIES.

DESIGN SIMULATION

Bonfiglioli has the most advanced **virtual simulation techniques** that allow to speed up the validation process, thus reducing time to market and providing customers with optimized and efficient solutions.

TEST LABORATORIES

In our R&D department we **research, develop, validate and certify** all the products and solutions which are engineered and manufactured in our plants across the world.

CO-ENGINEERING

At Bonfiglioli we **work close to our customers to satisfy all their needs** and requirements with a true tailormade solution.

OUR GLOBAL PRESENCE

Thanks to an international network of closely interconnected commercial and production sites, we can guarantee the same high standards of Bonfiglioli quality anywhere at any given time. We know that our direct presence in local markets is the key to long-lasting success, so our family includes 18 production sites, 23 commercial sites and more than 550 distributors around the world.

Our organization is always close by, offering complete and efficient solutions and supporting our customers with dedicated services, co-engineering and after-sales assistance.
